

Technical Specifications

PARKLAND

Primary Application

The original slamlock **ParkLand** is still the best MGB enclosure to work with. The **ParkLand** bin retention system is stylish and robust and offers an optional unique adjustable leg system to ensure level installation on uneven ground. **ParkLand** turns an unsightly MGB site into a hygienic, secure and highly aesthetic feature in street and open space areas.

Designed in consultation with Local Government the **ParkLand** is a four sided "lattice style" litter bin enclosure which ensures quick and easy emptying due to its slam shut door. With no lifting required the MGB rolls out easily when the door is unlocked. Its robust construction with a one piece cowling designed to accept street litter only, **ParkLand** is your frontline against hard rubbish dumping.

Features

- One piece cowling prevents water from entering the MGB for residue free emptying.
- ParkLand suits 120L and 240L mobile garbage bins.
- Uses a high quality "slam shut" locking mechanism.
- Optional legs can be adjusted after the bin has been fitted to slab or paving to ensure level installation.
- Hygienic, hands free operation.
- Using MGB's means bin can be emptied without manual lifting.

Options

- Available in hooded, open or recycling cowl
- Available in 2mm mild steel, 1.6mm 304 or 316 stainless steel and 2.0mm 304 or 316 stainless steel
- Available in 120L or 240L ParkLands
- Recycling stations in 120L only
- 2mm mild steel is under coated, powder coated and clear coated.
